

MEMORY MASTERY

A 12-Week Learn-by-Doing Programme

Build the tools. Practise them deliberately. Use them in real life.

Your rule: No more collecting techniques. Every session must end with an attempt to recall something without looking.

Name: _____

Start date: _____

Target completion date: _____

How to Use This Pack

This is a training programme, not a reference book. Start with Week 1 and complete one session each day. A normal session takes 20-25 minutes. On busy days, use the 7-minute minimum version rather than skipping.

- ☐ Warm up by recalling yesterday's material before looking at it.
- ☐ Encode today's material into vivid images and locations.
- ☐ Test yourself with the page covered or closed.
- ☐ Review errors by strengthening the image - never by merely rereading.
- ☐ Use one technique on something real that day.
- ☐ Record a score. Improvement requires evidence.

The 7-minute minimum: 2 minutes yesterday recall + 3 minutes encoding five items + 2 minutes testing. Keeping the chain alive matters more than completing a perfect session.

The Mastery Loop

1. Recall Before looking	2. Encode Turn into images	3. Place Attach to a route	4. Retrieve Test without clues	5. Repair Fix weak images
-----------------------------	-------------------------------	-------------------------------	-----------------------------------	------------------------------

What “Mastered” Means

A technique is mastered when you can choose it quickly, use it on unfamiliar material, recall accurately after a delay, and apply it outside a practice exercise. Speed comes after reliability.

Part I - Build Your Memory Toolkit

1. Image-Making Vocabulary

Abstract information is difficult to hold. Convert it into something visible, active and exaggerated. Good images are specific enough to see and strange enough to notice.

Information	Weak image	Stronger image	Why it works
justice	a courtroom	a giant judge balancing you on golden scales	movement, scale and personal involvement
1789	the written number	a dove (17) smashing a puffing pipe (89)	number sounds become concrete objects
mitochondria	a diagram	a mighty engine inside a cell-shaped jelly	sound-link plus function
Sarah	the name printed	Sarah wearing a sari while surfing	name sound attached to the person

Create four images now:

2. Your First Memory Palaces

A memory palace is a familiar place with an ordered route of distinct stopping points, called loci. Use one image per locus at first. Always travel in the same direction.

Selection test: You should be able to close your eyes and mentally walk the route without inventing or

searching for locations.

Palace A - Your home

Example: front door → doormat → coat hook → mirror → stairs → sofa → television → dining table → sink → fridge

My ordered route:

Palace B - A regular journey

Example: driveway → first corner → crossing → shop → traffic lights → bridge → station entrance → platform → sign → destination

My ordered route:

Palace C - A familiar building

Example: gate → reception → corridor → first classroom → stairs → hall → library → office → playground → exit

My ordered route:

3. Major System: Numbers Become Images

The Major System converts digits into consonant sounds. Vowels do not count, so you can insert them freely to make words.

Digit	Sound	Memory cue	Examples
0	s, z	zero starts with z	saw, zoo
1	t, d	one downstroke	tea, tie
2	n	two downstrokes	Noah, knee

3	m	three downstrokes	emu, ham
4	r	last sound of four	ray, row
5	l	Roman L = 50	law, lily
6	j, sh, ch, soft g	six resembles a j	shoe, jaw
7	k, hard g	two 7s form a K	cow, key
8	f, v	cursive f resembles 8	ivy, fee
9	p, b	9 resembles p/b	bee, pie

00-99 Image Builder

Use the examples as temporary scaffolding. Replace any image that is unclear, too similar to another, or not instantly visible to you.

84	fire	89	VIP	94	bear	99	pipe
----	------	----	-----	----	------	----	------

4. Person-Action-Object (PAO) System

PAO compresses three two-digit numbers into one scene: the first number supplies the person, the second the action, and the third the object. Example: 15-24-73 might become Albert Einstein (15) nailing (24 action) a comb (73 object).

Do not build all 100 at once. Start with 00-09, practise them, then add ten per week. Each person must have one unmistakable action and one unmistakable object.

5. Standard Symbol Bank

Repeated abstract ideas deserve permanent symbols. They reduce the effort required when memorising books, history, science or speeches.

Idea	Suggested symbol	My permanent symbol
increase	inflating balloon	
decrease	melting ice cube	
cause	lit fuse	
effect	explosion	
government	crown or Parliament	
law	judge's gavel	
war	crossed swords	
trade	two hands exchanging boxes	
energy	lightning bolt	
time	large clock	
important	gold spotlight	
question	giant hook-shaped question mark	

6. Review System

Encoding creates a memory; retrieval strengthens it. Review by trying to recall before checking. Use this default schedule for information you want to retain:

Immediately	Next day	3 days	7 days	14 days	30 days
☐	☐	☐	☐	☐	☐

Part II - Your Daily Practice

The 20-Minute Session

Stage	Time	Exactly what to do
Warm up	3 min	Recall yesterday's items in order and backwards. Do not look first.
Technique drill	4 min	Practise today's image, palace, number or name skill.
Encode	6 min	Memorise the supplied material using the named method.
Distract	2 min	Stand up, count backwards, or make tea. Do not rehearse.
Test and repair	4 min	Write or say everything recalled. Rebuild only weak links.
Real-life use	1+ min	Apply the technique to one genuine need that day.

Why Warm Up With Yesterday's Material?

Because recall is the skill you are training. Looking first creates familiarity, not retrieval. Yesterday's test also reveals whether your images were distinctive enough and begins spaced review automatically.

Common Problems and Repairs

Problem	Likely cause	Repair
I cannot see images clearly	You may expect photographic imagery	Use conceptual knowing plus action, sound and emotion; vividness is not the same as visual sharpness.
I remember the image but not the meaning	The link is arbitrary or incomplete	Make the image perform the meaning, not merely sit beside it.
Items swap order	Loci are too similar or route is uncertain	Choose more distinct loci and rehearse the empty route.
I forget after a day	No delayed retrieval	Use the 1-3-7-14-30 day review schedule.
It takes too long	Images are over-designed	Use the first workable image; speed grows through repetition.
Numbers collide	Images sound or look alike	Replace them with objects from different categories and sizes.
I stop practising	Session is too large or lacks a trigger	Use the 7-minute minimum immediately after a stable habit such as breakfast.
I practise but never use it	Exercises are disconnected from life	Complete the REAL USE line every day, even with one small item.

I will practise memory immediately after: _____

My normal practice place is: _____

My minimum session is 7 minutes. I may stop after it, but I may not skip without first doing it.

DAILY MEMORY WARM-UP

RECALL BEFORE YOU LOOK

1 CLOSE THE MATERIAL

Do not reread yesterday's list. Familiarity can feel like memory, but it is not recall.

2 WALK YESTERDAY'S ROUTE

Move through every locus in order. Name each image and translate it back into the original information.

3 GO BACKWARDS

Reverse recall checks that the route is genuinely strong rather than a rehearsed chain.

4 SCORE IT

Write correct / total. A missed item is useful evidence, not failure.

5 REPAIR, DON'T REREAD

Make the weak image larger, stranger, more active or more logically connected to its meaning.

6 THEN START TODAY

Yesterday's recall is your warm-up. Today's encoding is your main set.

WHY? Retrieval strengthens memory, exposes weak links and makes techniques automatic. Looking first only makes the material seem familiar.
